

Rhino to Oculus Quest

In the following steps we are going to learn how to share our designs directly from Rhino into Oculus Quest device.

We are going to use [SimLab VR Plugin for Rhino](#) to do that.

Download and setup the Extension

1. Go to [SimLab VR Plugin for Rhino](#), then download the plugin on your desktop (windows or macOS).
2. Open Rhino.
3. On the ribbon then **Right Click > Show Toolbar > SimLab VR**.

Sharing Models

1. Open your model on Rhino.

The 3D model used in this example can be found here. [Download Link](#)

2. Click on Sync with Wireless Device.

3. Fill out the information then click on **Upload to My Account**.

A dark-themed dialog box titled "Sync with Wireless Device" with a close button (X) in the top right. It contains three input fields: "Title" with the text "Hut", "Publisher" with the text "SimLab User", and "Description" which is empty. To the right of the "Title" and "Publisher" fields is a small preview image of a 3D model of a hut. At the bottom right, there is a button labeled "Upload to My Account". A white mouse cursor is pointing at this button.

It will take few moments then it should say that its **Uploaded Successfully**.

A dark-themed dialog box titled "Cloud Sharing" with a close button (X) in the top right. At the top, a message "Uploaded Successfully" is displayed in a yellow box. Below this, text reads "To view the model on your wireless peripheral, you can either login or pair". There are two main options: "Login" on the left, which includes an icon of a person and input fields for a username and password, and "Pair" on the right, which includes an icon of a server connected to a wireless device. At the bottom, there is a section for a "Direct Web Link" with the URL "ab-soft.com/content/share/cb471c12-3448-4186-87f3-464be4e5da11" and a copy icon. A "Close" button is located at the bottom right.

Advanced VR Creation

If you want to create interactive VR Experiences with better environments, visual effects, use different 3D file types, create training sessions, quizzes and more. You can use SimLab VR Studio, [Learn more](#).

You can learn how to enhance the quality by enabling shadows on the Oculus quest [here](#).
