

On Message Received

SimLab Composer 14 introduces WebSocket support, enabling seamless integration with external systems allowing it to work with external hardware, co-simulation engines, and websites, unlocking numerous possibilities.

Use the node On Message Received to trigger an event when a message is received.

The WebSocket nodes (Open External Connection, Send Message, and Receive Message) are exclusively available in the Ultimate Edition.

Input Ports:

- Enable

Output Ports:

- Execute
- Message
