

Send Message

A node to send a message over a WebSocket connection. Use the Send Message node to communicate with the WebSocket server. Ensure your message follows a protocol that the server and other clients can process.

The WebSocket nodes (Open External Connection, Send Message, and Receive Message) are exclusively available in the Ultimate Edition.

Input Ports:

- Executive
- URL: WebSocket URL that includes the server IP address, port, and channel (optional). Example: ws://server1.simlab-soft.com:8765/robots_1
- Message

Output Ports:

- Execute
 - URL
 - Message
-
