

# Variable

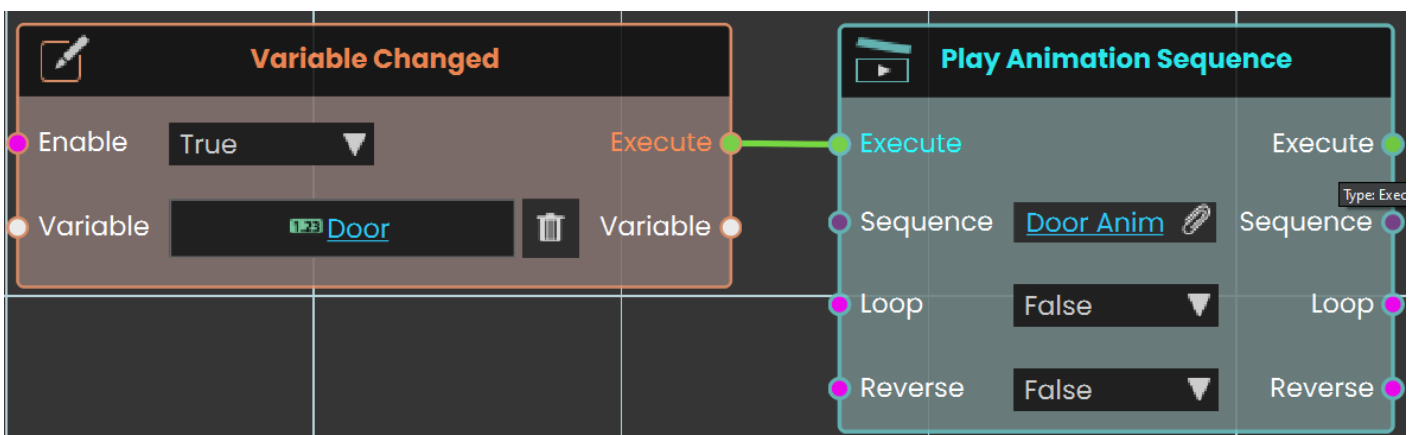

## Variable Changed

The **Variable Changed** event

activates when the value of a specified variable is modified. This event helps users detect real-time changes and trigger actions accordingly, enabling dynamic and responsive interactions within the VR Experience.

## Example

In this example, the **Variable Changed** event is set to monitor changes in the variable **Door**. When the value of this variable is modified, the event triggers the **Play Animation Sequence** node, which activates the **Door Anim** animation sequence.
